Exploration Blocks

Security Index - Incidents per quarter for all municipalities touching the block

Each week we register all the security incidents affecting any zone with hydrocarbons activity. In order to do so, first we identify the municipalities in which we can find any kind of hydrocarbons activity (e.g. Pipelines, Wells, Refineries etc). Then, we track all security incidents that occurred in those municipalities and we classify them according to their nature (e.g. Pipeline Terrorist Attacks, Explosives, Kidnaps, etc). With this, we are able to have statistics not only of the amount of incidents in a period of time but also by region, by basin and even by type of incident. Blocks can span many municipalities. In the graph above we are showing all the incidents per quarter that happened in the municipalities touching the block.
